

Hosted Exchange Server - Hosted SharePoint Services

HOSTED WINDOWS SHAREPOINT SERVICES:

Hosted SharePoint Services

Whether you collaborate with team members across town or with vendors overseas, Hosted Windows SharePoint Services v3.0 sites let you compare notes, share schedules, and work together on virtually any type of file. Hosted Windows SharePoint Services v3.0 also makes it easy to launch and maintain intranets, Web sites, bulletin boards, and picture libraries. Improve your project management with shared calendars and issue tracking. You can access critical documents from any Web browser from anywhere at any time.

Enrollment is a 10 minute process online. If you would like to enroll for Hosted SharePoint Services click [HERE](#).

Workflow Management

Make your workforce more efficient with clearly defined and rule managed workflows. Hosted Windows SharePoint Services v3.0 automates every aspect of daily work processes. You can automate everything from paid-time off schedules to project coordinating. When employees make requests all relevant parties are notified so there are no breakdowns in communication.

Manage Information

Hosted Windows SharePoint Services v3.0 sites are great for storing information such as event calendars, contacts, Web links, discussions, issues lists, and announcements. In addition to using the rich set of built-in lists, you can create custom lists in your team site that meet your team's specific information-sharing needs.

Share Files

Hosted Windows SharePoint Services v3.0 provides your team site with document storage and retrieval, with check-in and check-out functionality, version history, custom properties, and flexible, customizable views. Your team members can easily find and share documents and other files.

Collaborate

Your team can take collaboration to the

next level with Hosted Windows SharePoint Services v3.0 from .com. Team members can easily create collaborative workspace sites to share and manage their team information. Threaded discussions, surveys, shared calendars, task lists and other collaboration features help keep you and your teammates connected and productive.

Customize

Team sites based on Windows SharePoint Services v3.0 Services are useful right out of the box. However, if you want to, you can customize your site, changing its appearance and adding functionality without using third-party applications or doing any programming.

Windows
SharePoint Services v3.0 Gives Strategic Value

Effective

information sharing and collaboration is rapidly becoming a strategic platform advantage, but that advantage can be compromised if collaboration technologies are deployed in a piecemeal fashion.

Our Hosted Windows SharePoint Services v3.0 platform provides the following advantages:

Fast time-to-market functionality, assuring you a quick, cost-effective deployment that can be integrated into daily business workflows in no time.

Incremental deployment options, enabling you to implement collaboration capabilities within your organization's timeframe and budget.

Easy and cost-effective extensibility, enabling you to build organization-specific solutions and work with well-managed, hosted services connecting customers, partners, and suppliers.

Integration with familiar tools, enabling users to quickly and easily share information and collaborate with peers.

Organization-wide standards, providing persistent security, management, and integration on a scalable platform.

How Hosted Windows SharePoint Services v3.0 Works

Hosted Windows SharePoint Services v3.0 Services sites take file storage to a new level, providing communities for team collaboration and making it easy for users to work together on documents, tasks, contacts, events, and other information. In addition, team and site managers can coordinate site content and user activity easily. The Hosted Windows SharePoint Services v3.0 Services environment is designed for easy and flexible deployment, administration, and application development

Windows SharePoint Services v3.0 sites are made up of Web Parts and Windows ASP.NET-based components. Hosted Windows SharePoint Services v3.0 Services ships with a number of ready-to-use application templates; more will be available in the future from Microsoft and third-party vendors.

Team Community

Windows SharePoint Services v3.0 sites provide places to capture and share ideas, information, communication, and documents. The sites facilitate team participation in discussions, shared document collaboration, and surveys. Site content is accessible from both a Web browser and through clients that support Web Services. The document collaboration features allow for easy check in, check out, and document version control.

Top
Business Reasons to Deploy Hosted Windows SharePoint Services v3.0

v3.0 Services takes file sharing to a new level.

Instead of just dumping files into directories, Hosted Windows SharePoint Services v3.0 Services supplies Web sites with document storage and retrieval with check-in and check-out functionality, version history, custom metadata, and flexible, customizable views. Users can find and share data, with the added assurance that data will not be lost.

- You can share many kinds of information.

Windows SharePoint Services v3.0 sites store event calendars, contacts, Web links, discussions, issues lists, announcements, and much more. By using Hosted Windows SharePoint Services v3.0 Services, you can create smart places that help your users share information and get work done, not just a place to save files.

- Users get the authority, flexibility, and customization they need.

You can grant users the ability to create sites, allow them to control site membership, monitor site usage directly, and moderate content submissions. Users can even create site templates and share them with one another, reusing customized, proven site solutions.

- IT gets the management tools it needs.

Despite the authority delegated to users, Hosted Windows SharePoint Services v3.0 Services also enables you to track which sites are created, who owns them, how long a site has gone unused, and so on. You can enforce quotas for sites, users, and storage; block users from adding specific file types to sites; and automatically delete sites that are unused for long periods of time.

- Hosted Windows SharePoint Services v3.0 Services has over 60 pre-made application templates.

You can deploy Hosted Windows SharePoint Services v3.0 Services in any way that works best for your organization. groupSPARK provides you with the option to use application templates to speed up the process of integrating Windows SharePoint Services v3.0 into your workflow. All templates provided are fully customizable.

- If you want to start small, Hosted Windows SharePoint Services v3.0 Services from groupSPARK.com will meet your needs and grow with you.

Despite the fact that it was engineered to scale to large enterprise deployments, Hosted Windows SharePoint Services v3.0 Services is perfect for small business, departmental, or pilot environments. groupSPARK.com's flexible pricing makes it easy

for you to start with small deployments and scale upwards as you see fit.

- You can enhance your Windows SharePoint Services v3.0 sites using Web Parts.

Site owners and users can add the Web Parts you provide to their site pages, adding new features to the sites they already use. ASP.NET developers can write Web Parts to provide data access, Web services, and many other applications and content to Windows SharePoint Services v3.0 sites.

- You can manage Windows SharePoint Services v3.0 Services the way you want.

You can manage and configure Hosted Windows SharePoint Services v3.0 Services from day one by using a Web browser or command-line utilities. This makes possible an unlimited number of customizable solutions. Hosted Windows SharePoint Services v3.0 Services will adjust to your work flow so you will not have to make any changes in your daily business operations to accommodate Windows SharePoint Services v3.0.

- You can use Microsoft Office System 2003 as a powerful set of collaboration tools.

Thanks to the Web services provided by Hosted Windows SharePoint Services v3.0 Services, programs in the Microsoft Office System-including Microsoft Office Word, Microsoft Office Excel, Microsoft Office PowerPoint, Microsoft Office InfoPath, and Microsoft Office OneNote-can use information in Windows SharePoint Services v3.0 sites natively. Programs in the Microsoft Office System allow users to add members to sites, assign tasks, and communicate with members both by e-mail or in real time by using online presence, all while working on documents stored in Windows SharePoint Services v3.0 sites. With Microsoft Office Outlook, users can view calendars and contact lists stored on Windows SharePoint Services v3.0 sites and can create and manage sites devoted to editing documents and organizing meetings.

- Easy implementation of blogs and wikis.

Provide creative forums for brainstorming ideas, building knowledge bases, or simply gathering information in an easy-to-edit format with new templates for implementing blogs (also known as weblogs) and wikis (Web sites that can be quickly edited by team members-no special technical knowledge required).
